Dedication**Acknowledgements**

I thank students and colleagues at the College of Information Science and Technology at Drexel University, the College of Information Studies at the University of Maryland, the New Jersey Institute of Technology, and Telcordia Technologies (formerly Bellcore). A great many people have given me support and advice in this project. Among these are Toni Carbo, Lee Giles, Stephen Hirtle, and Michael Lesk who provided particular encouragement.

Contents

Preface	iii
Contents	v
1. Information	1
1.1. What is Information?	1
1.2. Capturing, Representing, and Processing Information	3
1.3. Information Resources, Services, and Systems	9
1.4. The Language of Information	14
2. Category-Based Models for Knowledge Representation	19
2.1. Clusters, Categories, and Classes	19
2.2. Knowledge Organizing Systems	23
2.3. Data Models	26
3. Documents, Descriptions, and Organizing Information Resources	33
3.1. Information Objects and Documents	33
3.2. Organizing Information Resources	38
3.3. Hypertext and the Web as a Common-Use Hypertext	50
4. Using Information	59
4.1. Finding Using Information	59
4.2. Look – Information Seeking Behavior	61
4.3. Complex Questions and Searches	65
4.4. Decision Analysis	71
4.5. Decide	74
4.6. Do	78
4.7. Tasks, Information Environments, Workspaces, and Tool Ecologies	82
4.8. Complex Tasks: Problem Solving, Planning, and Design	87
4.9. Models of Flows and Systems	94
5. Cognition, Emotion, and Human Interaction with Computers	105
5.1. Being Human and Processing Information	105
5.2. Perception and Pre-attentive Processes	106
5.3. Higher-Level Cognition	112
5.4. Beliefs and Attitudes	118
5.5. Emotion, Affect, and Motivation	121
5.6. Individual Differences and User Models	123
5.7. Human-Computer Interfaces and Human-Computer Interaction	128
6. Social Interaction	137
6.1. The Social Milieux	138
6.2. Social Networks	140
6.3. Social Capital and Social Control	143
6.4. Social Constructs	146
6.5. Small Groups and Collaboration	150
6.6. Organizations	157

6.7. Institutions, Communities, and Culture	160
6.8. Education	163
6.9. Everyday Information Skills and Critical Thinking	175
7. Language and Communication	189
7.1. Natural Language	189
7.2. The Structure of Natural Language	191
7.3. Language and Interaction	198
7.4. Conversation, Dialog, and Social Interaction	208
7.5. Culture and Language	212
7.6. Transition Networks, Grammars, and Languages	213
8. Information System Architectures and Services	221
8.1. Information System Architectures	221
8.2. Service-Oriented Architectures	224
8.3. Libraries and Library Services	229
8.4. Knowledge Management and Enterprise Content Management	232
8.5. Archives	240
8.6. Software Engineering	247
8.7. Information System Management	254
9. Social Informatics and Economics	269
9.1. Social Policy: Freedom and Control of Information	269
9.2. Social Policy: Intellectual Property	271
9.3. Social Policy: Privacy, Anonymity, and Surveillance	279
9.4. Government, Public Policy, and Law	283
9.5. Economics	290
9.6. Production, Businesses, and Management	299
9.7. Functional Units of Businesses and their Use of Information	306
9.8. Information Economics	313
10. Scholarship, Science, Data Services, and Domain Informatics	329
10.1. Scholarship	329
10.2. Science	333
10.3. Data Sets	339
10.4. Mathematics and Logic	346
10.5. Biology as an Information Science	347
10.6. Medical, Clinical, and Health-Care Informatics	350
10.7. Spatial Information Systems	354
10.8. Information in Adversarial Situations	359
11. Human Language Technologies	367
11.1. Text	367
11.2. Reading and Writing	376
11.3. Text and Natural Language Processing	382
11.4. Information Extraction	385
11.5. Text Categorization and Summarization	388
11.6. Text Document Retrieval with Full-Text Indexing	390
11.7. Search Engines Interfaces	394

11.8. Indexing and Searching the Web	398
11.9. Incorporating Social Information and Events into Searches	401
11.10. Automated Question Answering	403
11.11. Multi-Language Processing	404
12. Multimedia, Hypermedia, and Simulation	413
12.1. About Multimedia	413
12.2. Visual Information	414
12.3. Audio	419
12.4. Active Visual Media	426
12.5. Hypermedia	429
12.6. Games	432
12.7. 3-D-objects, Tangibles, and Physical Environments	434
12.8. Modeling and Simulation	435
A. Appendix	447
-A.1. Information Theory	447
-A.2. Compression	449
-A.3. Graph Theory	456
-A.4. Algorithms	464
-A.5. Additional Search Engine Procedures and Algorithms	467
-A.6. Logic	469
-A.7. Probabilities and Probabilistic Inference	474
-A.8. Formal Models for Decision Making	476
-A.9. Mathematical Models	479
-A.10. Learning Mechanisms and Machine Learning	487
-A.11. Brain Science	492
-A.12. Encryption and Cryptography	495
-A.13. Hidden Markov Models	497
-A.14. Servers and Networks	499
-A.15. Transmission and Networking	501
-A.16. Computing Architectures and Operations	508
-A.17. Input/Output Devices	511
-A.18. Sensors	513
-A.19. Storage Technology	516
